

# 2010 **Alabama**

## Introduction

Where we live matters to our health. The health of a community depends on many different factors, including quality of health care, individual behavior, education and jobs, and the environment. We can improve a community's health through programs and policies. For example, people who live in communities with ample park and recreation space are more likely to exercise. which reduces heart disease risk. People who live in communities with smoke-free laws are less likely to smoke or to be exposed to second-hand smoke, which reduces lung cancer risk.

The problem is that there are big differences in health across communities, with some places being much healthier than others. And up to now, it has been hard to get a standard way to measure how healthy a county is and see where they can improve.

The Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute are pleased to present the 2010 County Health Rankings, a collection of 50 reports that reflect the overall health of counties in every state across the country. For the first time, counties can get a snapshot of how healthy their residents are by comparing their overall health and the factors that influence their health, with other counties in their state. This will allow them to see county-to-county where they are doing well and where they need to improve. Everyone has a stake in community health. We all need to work together to find solutions. The County Health Rankings serve as both a call to action and a needed tool in this effort.

All of the County Health Rankings are based upon this model of population health improvement:

In this model, health outcomes are measures that describe the current health status of a county. These health outcomes are influenced by a set of health factors. These health factors and their outcomes may also be affected by community-based programs and policies designed to alter their distribution in the community. Counties can improve health outcomes by addressing all health factors with effective, evidence-based programs and policies.

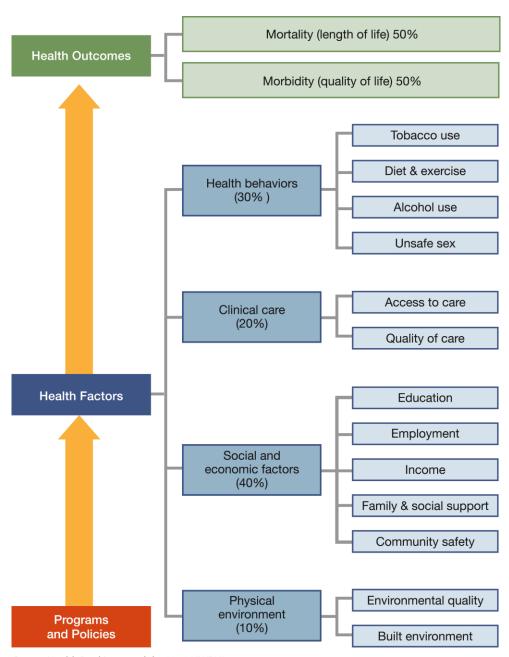

Institute of Medicine, 2002

To compile the Rankings, we built on our prior work in Wisconsin, worked closely with staff from the Centers for Disease Control and Prevention and Dartmouth College, and obtained input from a team of expert advisors. Together we selected a number of population health measures based on scientific relevance, importance, and availability of data at the county level. For a more detailed explanation of the choice of measures, see www.countyhealthrankings.org.

## **The Rankings**

This report ranks Alabama counties according to their summary measures of **health outcomes** and **health factors**, as well as the components used to create each summary measure. The figure below depicts the structure of the *Rankings* model. Counties receive a rank for each population health component; those having high ranks (e.g., 1 or 2) are estimated to be the "healthiest."

Our summary **health outcomes** rankings are based on an equal weighting of mortality and morbidity measures. The summary **health factors** rankings are based on weighted scores of four types of factors: behavioral, clinical, social and economic, and environmental. The weights for the factors (shown in parentheses in the figure) are based upon a review of the literature and expert input but represent just one way of combining these factors.

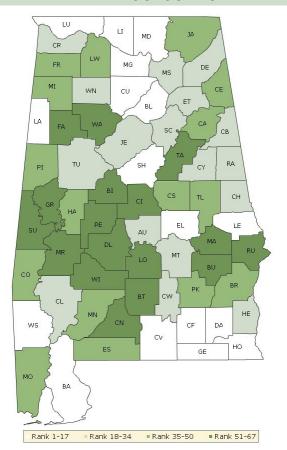

County Health Rankings model ©2010 UWPHI

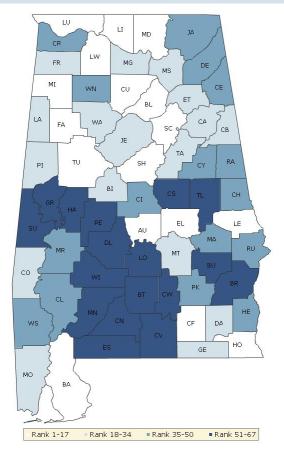

The maps on this page display Alabama's counties divided into groups by health rank. The lighter colors indicate better performance in the respective summary rankings. The green map shows the distribution of summary health outcomes. The blue displays the distribution of the summary rank for health factors.

Maps help locate the healthiest and least healthy counties in the state. The health factors map appears similar to the health outcomes map, showing how health factors and health outcomes are closely related.

### **HEALTH OUTCOMES**

## **HEALTH FACTORS**

# **Summary Health Outcomes & Health Factors Rankings**

Counties receive two summary ranks:

- Health Outcomes
- Health Factors

Each of these ranks represents a weighted summary of a number of measures.

Health outcomes represent how healthy a county is while health factors are what influences the health of the county.

Rank	Health Outcomes	Rank	Health Factors
1	Shelby	1	Shelby
2	Lee	2	Madison
3	Baldwin	3	Baldwin
4	Madison	4	Limestone
5	Morgan	5	Elmore
6	Limestone	6	Lauderdale
7	Elmore	7	Cullman
8	Houston	8	Tuscaloosa
9	Coffee	9	Blount
10	Blount	10	Autauga
11	Dale	11	Lee
12	Lauderdale	12	Houston
13	Geneva	13	Coffee
14	Washington	14	Fayette
15	Cullman	15	Marion
16	Covington	16	Lawrence
17	Lamar	17	St. Clair
18	St. Clair	18	Montgomery
19	DeKalb	19	Bibb
20	Montgomery	20	Cleburne
21	Clarke	21	Morgan
22	Tuscaloosa	22	Mobile
23	Autauga	23	Pickens
24	Crenshaw	24	Marshall

55	Butler	55	Tallapoosa
56	Conecuh	56	Monroe
57	Chilton	57	Conecuh
58	Marengo	58	Escambia
59	Fayette	59	Hale
60	Wilcox	60	Butler
61	Sumter	61	Sumter
62	Dallas	62	Bullock
63	Bullock	63	Dallas
64	Lowndes	64	Perry
65	Walker	65	Wilcox
66	Greene	66	Greene
67	Perry	67	Lowndes

# **Health Outcomes Rankings**

The summary health outcomes ranking is based on measures of mortality and morbidity. Each county's ranks for mortality and morbidity are displayed here. The mortality rank, representing length of life, is based on a measure of premature death: the years of potential life lost prior to age 75.

The morbidity rank is based on measures that represent health-related quality of life and birth outcomes. We combine four morbidity measures: self-reported fair or poor health, poor physical health days, poor mental health days, and the percent of births with low birthweight.

Rank	Mortality	Morbidity
1	Shelby	Shelby
2	Lee	Baldwin
3	Madison	Lee
4	Baldwin	Morgan
5	Houston	Covington
6	Lauderdale	Madison
7	Limestone	Elmore
8	Lamar	Limestone
9	Blount	Macon
10	Coffee	Coffee
11	Morgan	Houston
12	Elmore	
13	Dale	Henry
14		
	Tuscaloosa	Coosa
15	Crenshaw	Marshall
16	DeKalb	Dale
17	Cullman	Washington
18	Washington	Marion
19	Autauga	Blount
20	Geneva	Etowah
21	St. Clair	Jefferson
22	Monroe	Montgomery
23	Clarke	St. Clair
24	Montgomery	Bibb
25	Colbert	Randolph
26	Tallapoosa	Pike
27	Winston	Butler
28	Clay	Clarke
29	Chambers	Cullman
30	Barbour	DeKalb
31	Cleburne	Lawrence
32	Franklin	Lauderdale
33	Mobile	Jackson
34	Marshall	Clay
35	Talladega	Autauga
36	Jefferson	Chambers
37	Choctaw	Cleburne
38	Pickens	Tuscaloosa
39	Covington	Pickens
40	Jackson	Conecuh

Rank	Mortality	Morbidity
41	Cherokee	Calhoun
42	Randolph	Crenshaw
43	Marengo	Escambia
44	Henry	Lamar
45	Calhoun	Cherokee
46	Hale	Russell
47	Etowah	Colbert
48	Lawrence	Winston
49	Fayette	Chilton
50	Pike	Wilcox
51	Escambia	Hale
52	Russell	Franklin
53	Marion	Mobile
54	Chilton	Walker
55	Conecuh	Dallas
56	Wilcox	Barbour
57	Bibb	Tallapoosa
58	Sumter	Bullock
59	Coosa	Monroe
60	Butler	Lowndes
61	Macon	Sumter
62	Dallas	Choctaw
63	Greene	Fayette
64	Lowndes	Talladega
65	Bullock	Marengo
66	Walker	Greene
67	Perry	Perry

## **Health Factors Rankings**

The summary health factors ranking is based on four factors: health behaviors, clinical care, social and economic, and physical environment factors. In turn, each of these factors is based on several measures. Health behaviors include measures of smoking, diet and exercise, alcohol use, and risky sex behavior. Clinical

care includes measures of access to care and quality of care. Social and economic factors include measures of education, employment, income, family and social support, and community safety. The physical environment includes measures of environmental quality and the built environment.

Rank	Health Behaviors	Rank	Clinical Care	Rank	Social & Economic Factors	Rank	Physical Environment
1	Shelby	1	Jefferson	1	Shelby	1	Marion
2	Lauderdale	2	Shelby	2	Blount	2	Chilton
3	Limestone	3	Houston	3	Baldwin	3	Lawrence
4	Conecuh	4	Montgomery	4	Madison	4	Cullman
5	Baldwin	5	Mobile	5	Limestone	5	Lamar
6	Madison	6	Tuscaloosa	6	Elmore	5	Pickens
7	Elmore	7	Madison	7	Coffee	7	Hale
8	Lee	8	Dallas	8	Autauga	8	Dallas
9	Lamar	9	Chambers	9	Cullman	9	Chambers
10	Marion	10	Macon	10	Lee	10	Bibb
11	Pickens	11	Calhoun	11	St. Clair	11	Blount
12	Blount	12	Barbour	12	Lawrence	12	Elmore
13	Cleburne	13	Talladega	13	Cleburne	13	Franklin

# 2010 County Health Rankings: Measures, Data Sources, and Years of Data

	Measure	Data Source	Years of Data
HEALTH OUTCOMES	;		
Mortality	Premature death	National Center for Health Statistics	2004-2006
Morbidity	Poor or fair health	Behavioral Risk Factor Surveillance System	2002-2008
	Poor physical health days	Behavioral Risk Factor Surveillance System	2002-2008
	Poor mental health days	Behavioral Risk Factor Surveillance System	2002-2008
	Low birthweight	National Center for Health Statistics	2000-2006
HEALTH FACTORS			
HEALTH BEHAVIORS			
Tobacco	Adult smoking	Behavioral Risk Factor Surveillance System	2002-2008
Diet and Exercise	Adult obesity	National Center for Chronic Disease Prevention and Health Promotion	2006-2008
Alcohol Use	Binge drinking	Behavioral Risk Factor Surveillance System	2002-2008
	Motor vehicle crash death rate	National Center for Health Statistics	2000-2006
High Risk Sexual	Chlamydia rate	National Center for Health Statistics	2007
Behavior	Teen birth rate	National Center for Health Statistics	2000-2006
CLINICAL CARE			
Access to Care	Uninsured adults	Small Area Health Insurance Estimates, U.S. Census	2005
	Primary care provider rate	Health Resources & Services Administration	2006
Quality of Care	Preventable hospital stays	Medicare/Dartmouth Institute	2005-2006
	Diabetic screening	Medicare/Dartmouth Institute	2003-2006
	Hospice use	Medicare/Dartmouth Institute	2001-2005
SOCIOECONOMIC FAC	TORS		
Education	High school graduation	National Center for Education Statistics <sup>1</sup>	2005-2006
	College degrees	U.S. Census/American Community Survey	2000/2005-2007
Employment	Unemployment	Bureau of Labor Statistics	2008
Income	Children in poverty	Small Area Income and Poverty Estimates, U.S. Census	2007
	Income inequality	U.S. Census/American Community Survey <sup>2</sup>	2000/2005-2007
Family and Social Support	Inadequate social support	Behavioral Risk Factor Surveillance System	2005-2008
	Single-parent households	U.S. Census/American Community Survey	2000/2005-2007
Community Safety	Violent crime <sup>3</sup>	Uniform Crime Reporting, Federal Bureau of Investigation	2005-2007
PHYSICAL ENVIRONME	NT		
Air Quality⁴	Air pollution-particulate matter days	U.S. Environmental Protection Agency / Centers for Disease Control and Prevention	2005
	Air pollution-ozone days	U.S. Environmental Protection Agency / Centers for Disease Control and Prevention	2005
Built Environment	Access to healthy foods	Census Zip Code Business Patterns	2006
	Liquor store density	Census County Business Patterns	2006

State data sources for KY, NH, NC, PA, SC, and UT (2007-2008).
 Income inequality estimates for 2000 were calculated by Mark L. Burkey, North Carolina Agricultural & Technical State University, www.ncat.edu/~burkeym/Gini.htm.

<sup>&</sup>lt;sup>3</sup> Homicide rate (2000-2006) from National Center for Health Statistics for AK, AZ, AR, CO, CT, GA, ID, IN, IA, KS, KY, LA, MN, MS, MT, NE, NH, NM, NC, ND, OH, SD, UT, and WV. State data source for IL.

<sup>&</sup>lt;sup>4</sup> Not available for AK and HI.
